New antibody to non-shed human Mucl or Mucl6, useful for diagnosing, treating or monitoring malignancies, such as breast or ovarian cance cancer.

Claim 14; SEQ ID NO 15; 113pp; English.

This invention relates to a novel isolated monoclonal antibody that specifically binds to an epitope of a non-shed extracellular portion of a shed antigen or of human Mucl or Muclá protein. The invention may be useful for the development of compounds with a cytostatic or for gene therapy. The composition and methods are useful in diagnosing, treating or monitoring malignancies, such as breast or ovarian cancer. The present sequence is that of a peptide which was used for raising antibodies to the extracellular, non-shed region of Muclá and which is claimed in the specification.

Vater CA;
                                                                                                                                                                                                                                                          This invention relates to a novel isolated monoclonal antibody that specifically binds to an epitope of a non-shed extracellular portion c shed antigen or of human Mucl or Mucl6 protein. The invention may be useful for the development of compounds with a cytostatic or for gene therapy. The composition and methods are useful in diagnosing, treatif or monitoring malignancies, such as breast or ovarian cancer. The presented in that of a Muc epitope of the invention.

                                                                                                                                                                                                                           This invention relates to a novel isolated monoclonal antibody that specifically binds to an epitope of a non-shed extracellular portion of a shed antigen or of human Mucl or Muclé protein. The invention may be useful for the development of compounds with a cytostatic or for gene therapy. The composition and methods are useful in diagnosing, treating or monitoring malignancies, such as breast or ovarian cancer. The present sequence is that of the human Muclé GST fusion protein which was used in the exemplification of the invention.

The polypeptides, polynucleotides, antibodies, fusion proteins, T cell populations and antigen presenting cells that express the polypeptides are useful for stimulating an immune response in a patient and treating ovarian cancer. This sequence represents protein
New isolated 0772P polypeptides and polynucleotides, useful in gene therapy, particularly for treating or diagnosing cancer, e.g. ovarian
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Polypeptides comprising an immunogenic portion of an ovarian carcinoma protein or its variants, useful for stimulating an immune response in

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to an isolated O772P polypeptide, which has the structure fully defined in the specification. The composition containing the polypeptides, polynucleotides, fusion proteins, antibodies, T-cells or antigen presenting cells are useful for stimulating an immune response and treating ovarian cancer. Detecting the presence of the polynucleotides and polypeptides is useful for diagnosing cancer. Ovarian carcinoma cDNAs and protein cDNAs were identified using microarray technology. The present sequence represents a human ovarian carcinoma
The invention describes nucleic acids (I) and the polypeptides (II) tencode. The nucleic acids (I) may be used for preventing, diagnosing treating diseases related to their aberrant expression i.e. breast cancers. For example, (I) and (II) may be used to treat disorders
                                                                                                                                                                      Oncogenic nucleic acids useful treatment of breast cancer.
                                                                                                                                                                                                                                                     WPI; 2003-897152/82.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               in a patient's genome that affect the activity of (II) by expressing additionally, (I) may be used to produce (II), by inserting (I) into a host cell and culturing the cell to express the protein (II). If and its complementary sequences may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acids in samples, and therefore which patients may be in need of restorative therapy. The host cell may also be used as antigens in the production of antibodies against (II) and in assays to identify modulators of (II)'s expression and activity. The anti-(II) antibodies, agonists and expression and activity and as antigens in the production of antagonists may be used to regulate expression and activity and as diagnostic agents for detecting the presence of (II) in samples (e.g. by immunoassay). This sequence represents a secreted ovarian carcinoma
   This invention relates to polypeptides comprising an immunogenic portion of an ovarian carcinoma protein which acts as an immunostimulant and is cytostatic. The polypeptides, polynucleotides, antibodies, fusion proteins, T cell populations and antigen presenting cells that express the polypeptides are useful for stimulating an immune response in a patient and treating ovarian cancer. This sequence represents protein related to the invention
                                                                                                                                                                                                                                                                                                                      Polypeptides comprising an immunogenic portion of an protein or its variants, useful for stimulating an impatient and treating ovarian cancer.
                                                                                                                                                                                                                                                           Example
                                                                                                                                                                                                                                                                                                                                                                                                                                                     WPI; 2002-164781/21.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match
                                                                  The invention relates to an isolated O772P polypeptide, which has the structure fully defined in the specification. The composition containing the polypeptides, polynucleotides, fusion proteins, antibodies, T-cells or antigen presenting cells are useful for stimulating an immune response and treating ovarian cancer. Detecting the presence of the polynucleotides and polypeptides is useful for diagnosing cancer. Ovarian carcinoma cDNAs and protein cDNAs were identified using microarray
                                                                                                                                                                                                                            Mitcham

                                      The invention describes nucleic acids (I) and the polypeptides (II) they CC encode. The nucleic acids (I) may be used for preventing, diagnosing and CC treating diseases related to their aberrant expression i.e. breast CC cancers. For example, (I) and (II) may be used to treat disorders CC associated with decreased expression by rectifying mutations or deletions CC in a patient's genome that affect the activity of (II) by expressing CC inactive proteins or to supplement the patients own production of (II). And its CC host cell and culturing the cell to express the protein (II). (I) and its CC complementary sequences may also be used as DNA probes in diagnostic CC assays to detect and quantitate the presence of similar nucleic acids in CC samples, and therefore which patients may be in need of restorative CC antibodies against (II) and in assays to identify modulators of (II)'s CC expression and activity. The anti-(II) antibodies, agonists and carcinoma CC immunoassay). This sequence represents a secreted ovarian carcinoma

ABU54859
ID ABU54
CC the carboxy terminal domain comprises a transmembrane anchor with a short CC cytoplasmic domain, and further comprises 9 genomic exons. The gene for CC CA125 repeat domains, nucleic acids (including variants, homologues and CC CA125 repeat domains, nucleic acids (including variants, homologues and CC comprising the nucleic acid, a cultured cell comprising the vector comprising the nucleic acid, a cultured cell comprising the vector of the CA125 repeat units (or their variants, fragments or sequences of the CA125 repeat units (or their variants, fragments or sequences of CC identical to them), a purified antibody that selectively binds to an CC epicope in the receptor-binding domain of CA125 protein, a diagnostic for detecting and monitoring the presence of CA125 protein, a diagnostic for detecting and monitoring at least one repeat unit of the CA125 repeat CC domain including epitope binding sites), a therapeutic vaccine to treat CC disease or disease recurrence associated with elevated CA125 antigen levels or at risk of developing a CC levels (comprising recombinant CA125 repeat domains including epitope binding sites) and an antisense oligonucleotide that inhibits the CC domains are useful as a gold standard for detecting and monitoring the presence of CA125 antigen, which can be used for diagnosing, monitoring cor treating patients with ovarian cancer and other carcinomas where CA125 or treating patients with ovarian cancer and other carcinomas where CA125 or treating patients with ovarian cancer and other carcinomas where CA125 or treating patients with ovarian cancer and other carcinomas where CA125 or treating patients with ovarian cancer and other carcinomas where CA125 or treating patients with ovarian cancer and other carcinomas where CA125 or treating patients with ovarian cancer and other carcinomas where CA125 or treating patients with ovarian cancer and other carcinomas where CA125 or treating patients with ovarian cancer and other carcinomas where CA125 or treating patients with ovarian cancer 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           amino terminal domain; (b) an amino terminal extension; (c) a multiple repeat domain; and (d) a carboxy terminal domain. The extracellular amino terminal comprises 5 genomic exons, the amino terminal extension comprises 4 genomic exons, each repeat unit comprises 5 genomic exons and

                                                                                                                                                                                                                                                                                                                         This invention relates to polypeptides comprising an immunogenic portion of an ovarian carcinoma protein which acts as an immunostimulant and is cytostatic. The polypeptides, polymucleotides, antibodies, fusion proteins, T cell populations and antigen presenting cells that express the polypeptides are useful for stimulating an immune response in a patient and treating ovarian cancer. This sequence represents protein

                                                                                                                            გ
                                                                                                                                                                       Query Match
                                                                                                                                                    Matches
                                                                                                                                                                                                                         The invention relates to an isolated 0772P polypeptide, which has the structure fully defined in the specification. The composition containing the polypeptides, polynucleotides, fusion proteins, antibodies, T-cells or antigen presenting cells are useful for stimulating an immune response and treating ovarian cancer. Detecting the presence of the polynucleotides and polypeptides is useful for diagnosing cancer. Ovarian carcinoma cDNAs and protein cDNAs were identified using microarray technology. The present sequence represents a human ovarian carcinoma

                                                                                                                                                                                                                                                                                                   associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (II) by expressing inactive proteins or to supplement the patients own production of (II) additionally, (I) may be used to produce (II), by inserting (I) into a host cell and culturing the cell to express the protein (II). (I) and its complementary sequences may also be used as DNA probes in diagnostic assays to detect and quantitate the presence of similar nucleic acids in samples, and therefore which patients may be in need of restorative therapy. The host cell may also be used as antigens in the production of antibodies against (II) and in assays to identify modulators of (II)'s expression and activity. The anti-(II) antibodies, agonists and activity and antagonists may be used to regulate expression and activity and as antagonists may be used to regulate expression and activity and as immunoassay). This sequence represents a secreted ovarian carcinoma

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention describes nucleic acids (I) and the polypeptides (II) they encode. The nucleic acids (I) may be used for preventing, diagnosing and treating diseases related to their aberrant expression i.e. breast cancers. For example, (I) and (II) may be used to treat disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Example 16; SEQ ID NO 594; 399pp; English

CC AAD20618-AAD20624 represent cDNAs corresponding to 7 human ovarian and CC ovarian cancer associated protein (collectively known as ovarian cancer CC antigens) genes, and AAB12633-AAB12629 represent the proteins they CC encode. AAB12630-AAB12638 represent human ovarian cancer antigenic CC fragments or variants. Ovarian cancer antigens and their corresponding CC DNAs are used in the prevention, diagnosis and treatment of diseases CC associated with their inappropriate expression. These disorders include CC proliferative disorders, cancer, tumours, respiratory system disorders, CC asthma, haematopoletic disorders, diseases of the immune system, AIDS, CC skin disorders, autcimmune diseases (e.g., rheumatoid arthritis), CC inflammation, allergies, neurological disorders (e.g., Alzheimer's CC disease, Parkinson's disease), septic shock, diabetes, atherosclerosis, CC cardiovascular disorders, endocrine disorders, kidney disorders, gastrointestinal disorders, endocrine disorders and infections. The CC gastrointestinal disorders, endocrine disorders and infections CC gastrointestinal disorders, endocrine disorders and infections of gastrointestinal disorders, endocrine disorders and infections. The CC proteins can also be used to aid wound healing and epithelial cell coroliferation, to prevent skin aging due to sunburn, to maintein organs CC before transplantation, to identify their cognate ligands or binding CC symptoms associated with the disorders mentioned above and in diagnostic communications associated with the disorders mentioned above and in diagnostic communications.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        respiratory system disorder; asthma; haematopoletic disorder; skin aging; immune system disorder; AIDS; skin disorder; autoimmune disease; allergy; rheumatoid arthritis; inflammation; neurological disorder; septite shock; Alzheimer's disease; Parkinson's disease; diabetes; angiogenic disorder; atherosclerosis; cardiovascular disorder; gastrointestinal disorder; epithelial cell proliferation; transplantation; chemotaxis; infection; food additive; wound healing; endocrine disorder; kidney disorder; food additive; wound healing; endocrine disorder; kidney disorder;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    17-MAR-2000;
23-AUG-2000;
                                          immunoassays e.g., enzyme linked immunosorbent assay (ELISA). The DNA c the invention is used in gene therapy. The present sequence represents human ovarian cancer antigenic fragment of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Disclosure; Page 9; 427pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes an isolated polypeptide comprising an immunogenic portion of an ovarian carcinoma protein (or its variants). Ovarian carcinoma proteins, and polynucleotides encoding them, have cytostatic activity and can be used in gene therapy and vaccines. Ovarian carcinoma polypeptides, nucleic acids, antibodies and vaccines are useful for the prevention, diagnosts and treatment of cancer, preferably ovarian cancer. AAAG9691 to AAA70077 and AAB12552 to AAB12557 represent human ovarian carcinoma polynucleotides and proteins used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    17-DEC-1998;

            Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Score

Sequence 312, Application US/09667857 Patent No. 6699664 GENERAL INFORMATION:

RESULT 7

```
APPLICANT: Mitcham, Jennicold.

APPLICANT: King, Gordon E.

APPLICANT: King, Gordon E.

APPLICANT: Algate, Paul A.

TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR THE THERAPY AND TITLE OF INVENTION: DIAGNOSIS OF OVARIAN CANCER

FILE REFERENCE: 210121.462C2

CURRENT APPLICATION NUMBER: US/09/404,879A

CURRENT FILING DATE: 1999-09-24

INUMBER OF SEQ ID NOS: 393

SOFTWARE: FastSEQ for Windows Version 3.0

SEQ ID NO 388

LENGTH: 772

TYPE: PAT

ORGANISM: Homo sapiens

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    seq length: 0
